

- Everyone who was exposed to Covid-19 should test themselves either by antigen test or PCR on day 5 of exposure.
- If you are fully vaccinated (2 weeks out from your second vaccine) and asymptomatic you do not need to quarantine. You still need to wear a mask and monitor for symptoms for 10 days from exposure. If at any time you develop symptoms you should retest.
- If you are unvaccinated or partially vaccinated and 2 or older and can consistently wear a mask around others, you need to quarantine for 5 days from day of exposure (day zero of 5). If you have no symptoms and test negative you may leave quarantine but must wear a well fitting mask for day 6-10. If you are under 2 or unable to consistently wear a mask, you must quarantine for 7 days if you test negative on day 5 or 10 days without a test.
- **Everyone should quarantine while waiting for their test results to return.**
- Quarantine means you do not leave your house except for medical care to avoid exposing anyone else even if you have no symptoms. You do not go to work or school or to the store if you are under quarantine.
- If you develop symptoms of Covid-19 during quarantine please contact your provider.
